Grids, blocks, threads

EXAMPLE – VECTOR ADDITION

```
void sumArraysOnHost(float *A, float *B, float *C, int N)
{
    for(int i=0; i<size i++)
        C[i] = A[i] + B[i];
}
```

```
__global__ void sumArraysOnGPU(float *A, float *B, float *C, int N)
{
    int i=threadIdx.x;
    if(i<N)
        C[i] = A[i] + B[i];
}
```

HOW TO DEBUG A KERNEL

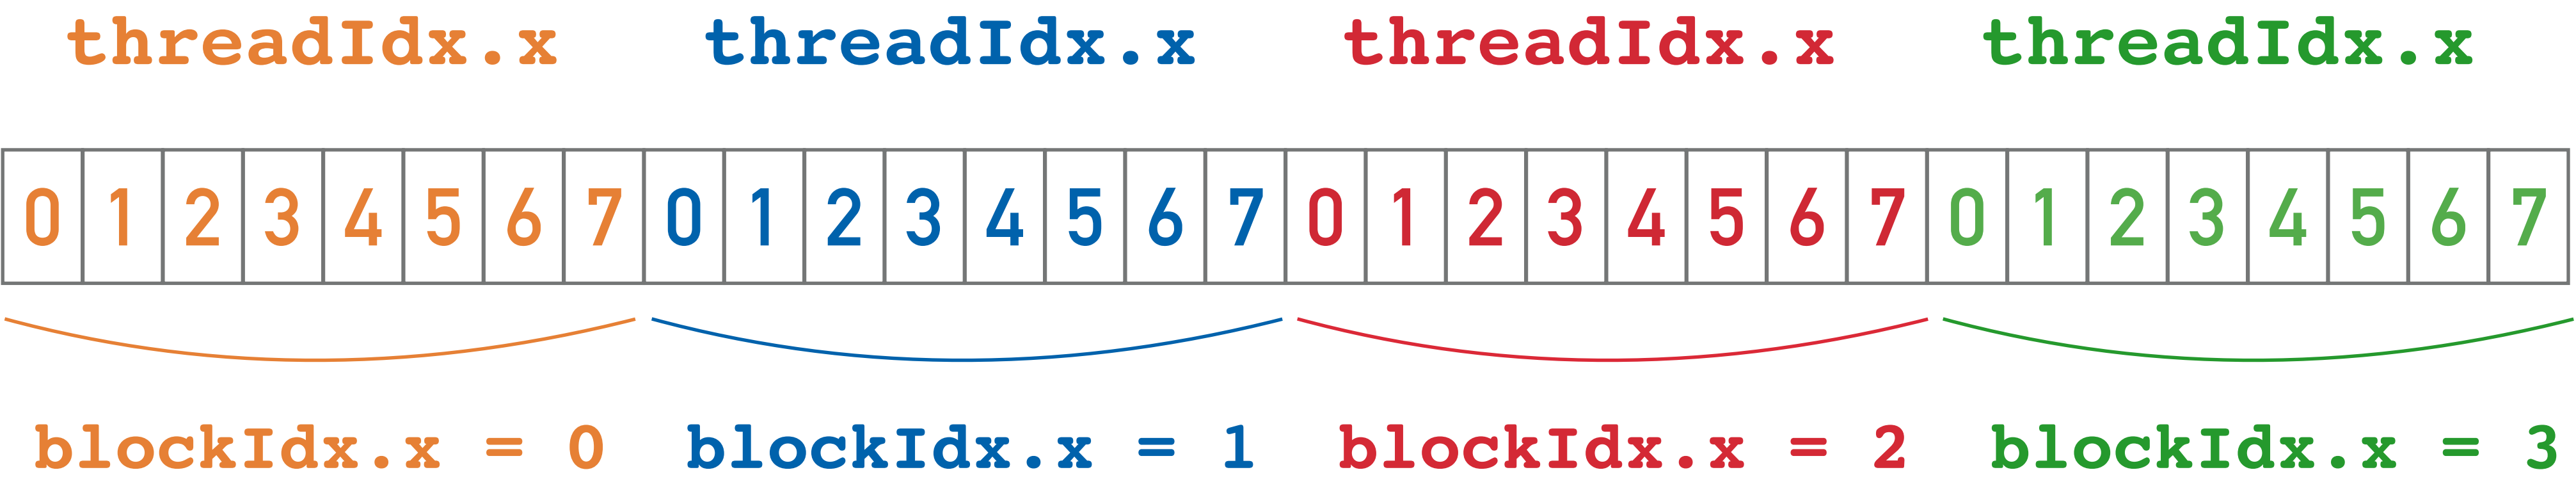

```
__global__ void sumArraysOnGPU(float *A, float *B, float *C, int N)
{
    int i=threadIdx.x;
    if(i<N)
        C[i] = A[i] + B[i];
}
```

```
sumArraysOnGPU<<<1,10000>>>(d_A, d_B, d_C, N)
//DEBUG - check for kernel errors
CHECK(cudaDeviceSynchronize());
CHECK(cudaGetLastError()):
```

BLOCKS AND THREADS

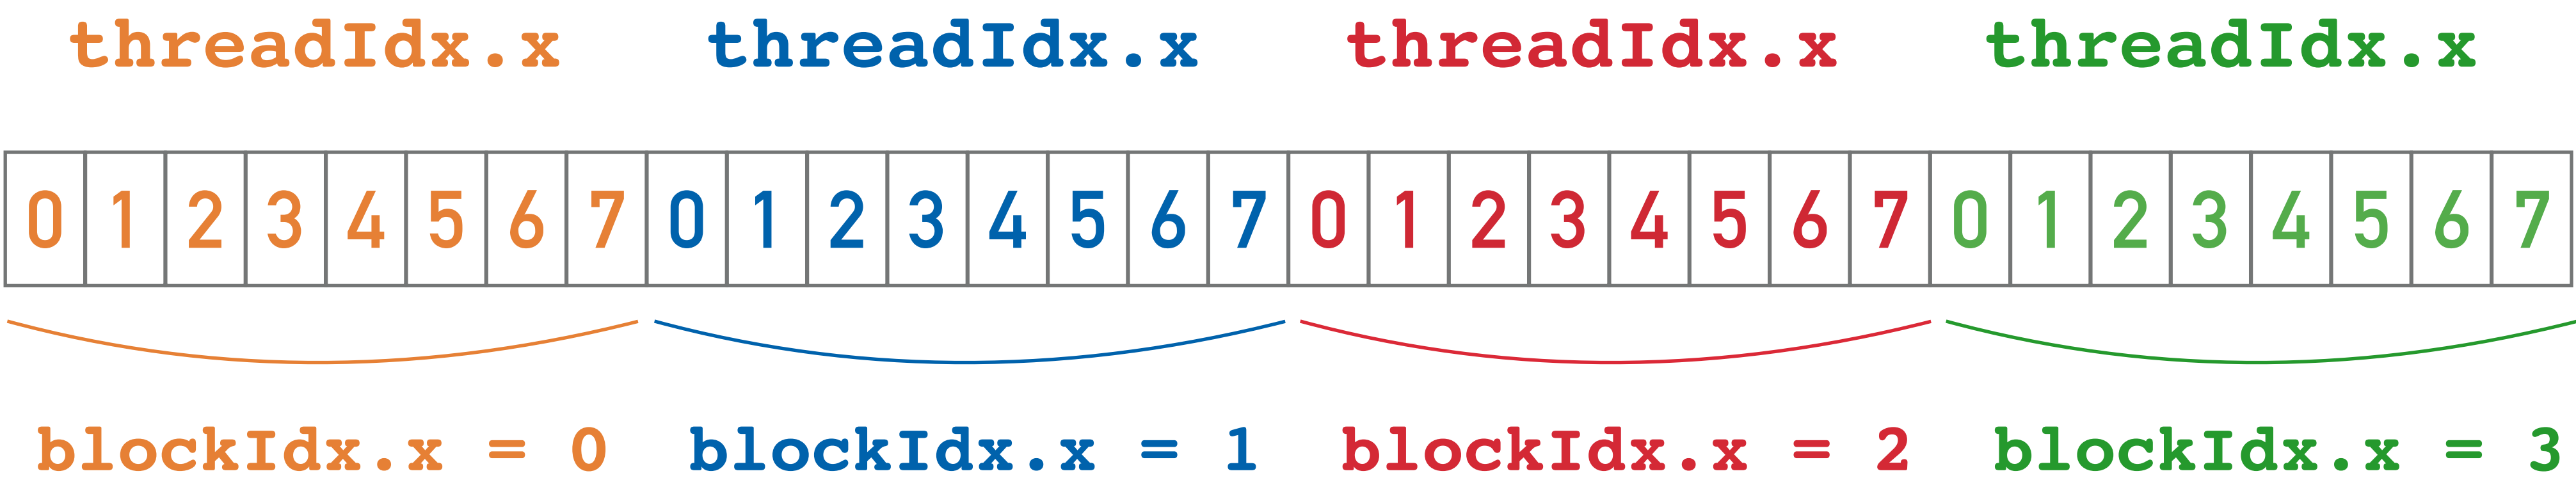

- `blockIdx.x` *index of a block*
- `blockDim.x` *number of threads in a block*
- `threadIdx.x` *index of a thread in a block*

`blockDim.x = 8`

BLOCKS AND THREADS

`blockDim.x = 8`

$$\text{index} = \text{blockIdx.x} * \text{blockDim.x} + \text{threadIdx.x}$$

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31
---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----

$$\begin{aligned} \text{index} &= \text{blockIdx.x} * \text{blockDim.x} + \text{threadIdx.x} \\ &= 2 * 8 + 6 \\ &= 22 \end{aligned}$$

BLOCKS AND THREADS

How many blocks do we need to “cover” an array which size is not divisible by nThreads?

0	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29
---	---	---	---	---	---	---	---	---	---	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----	----

nx = 30

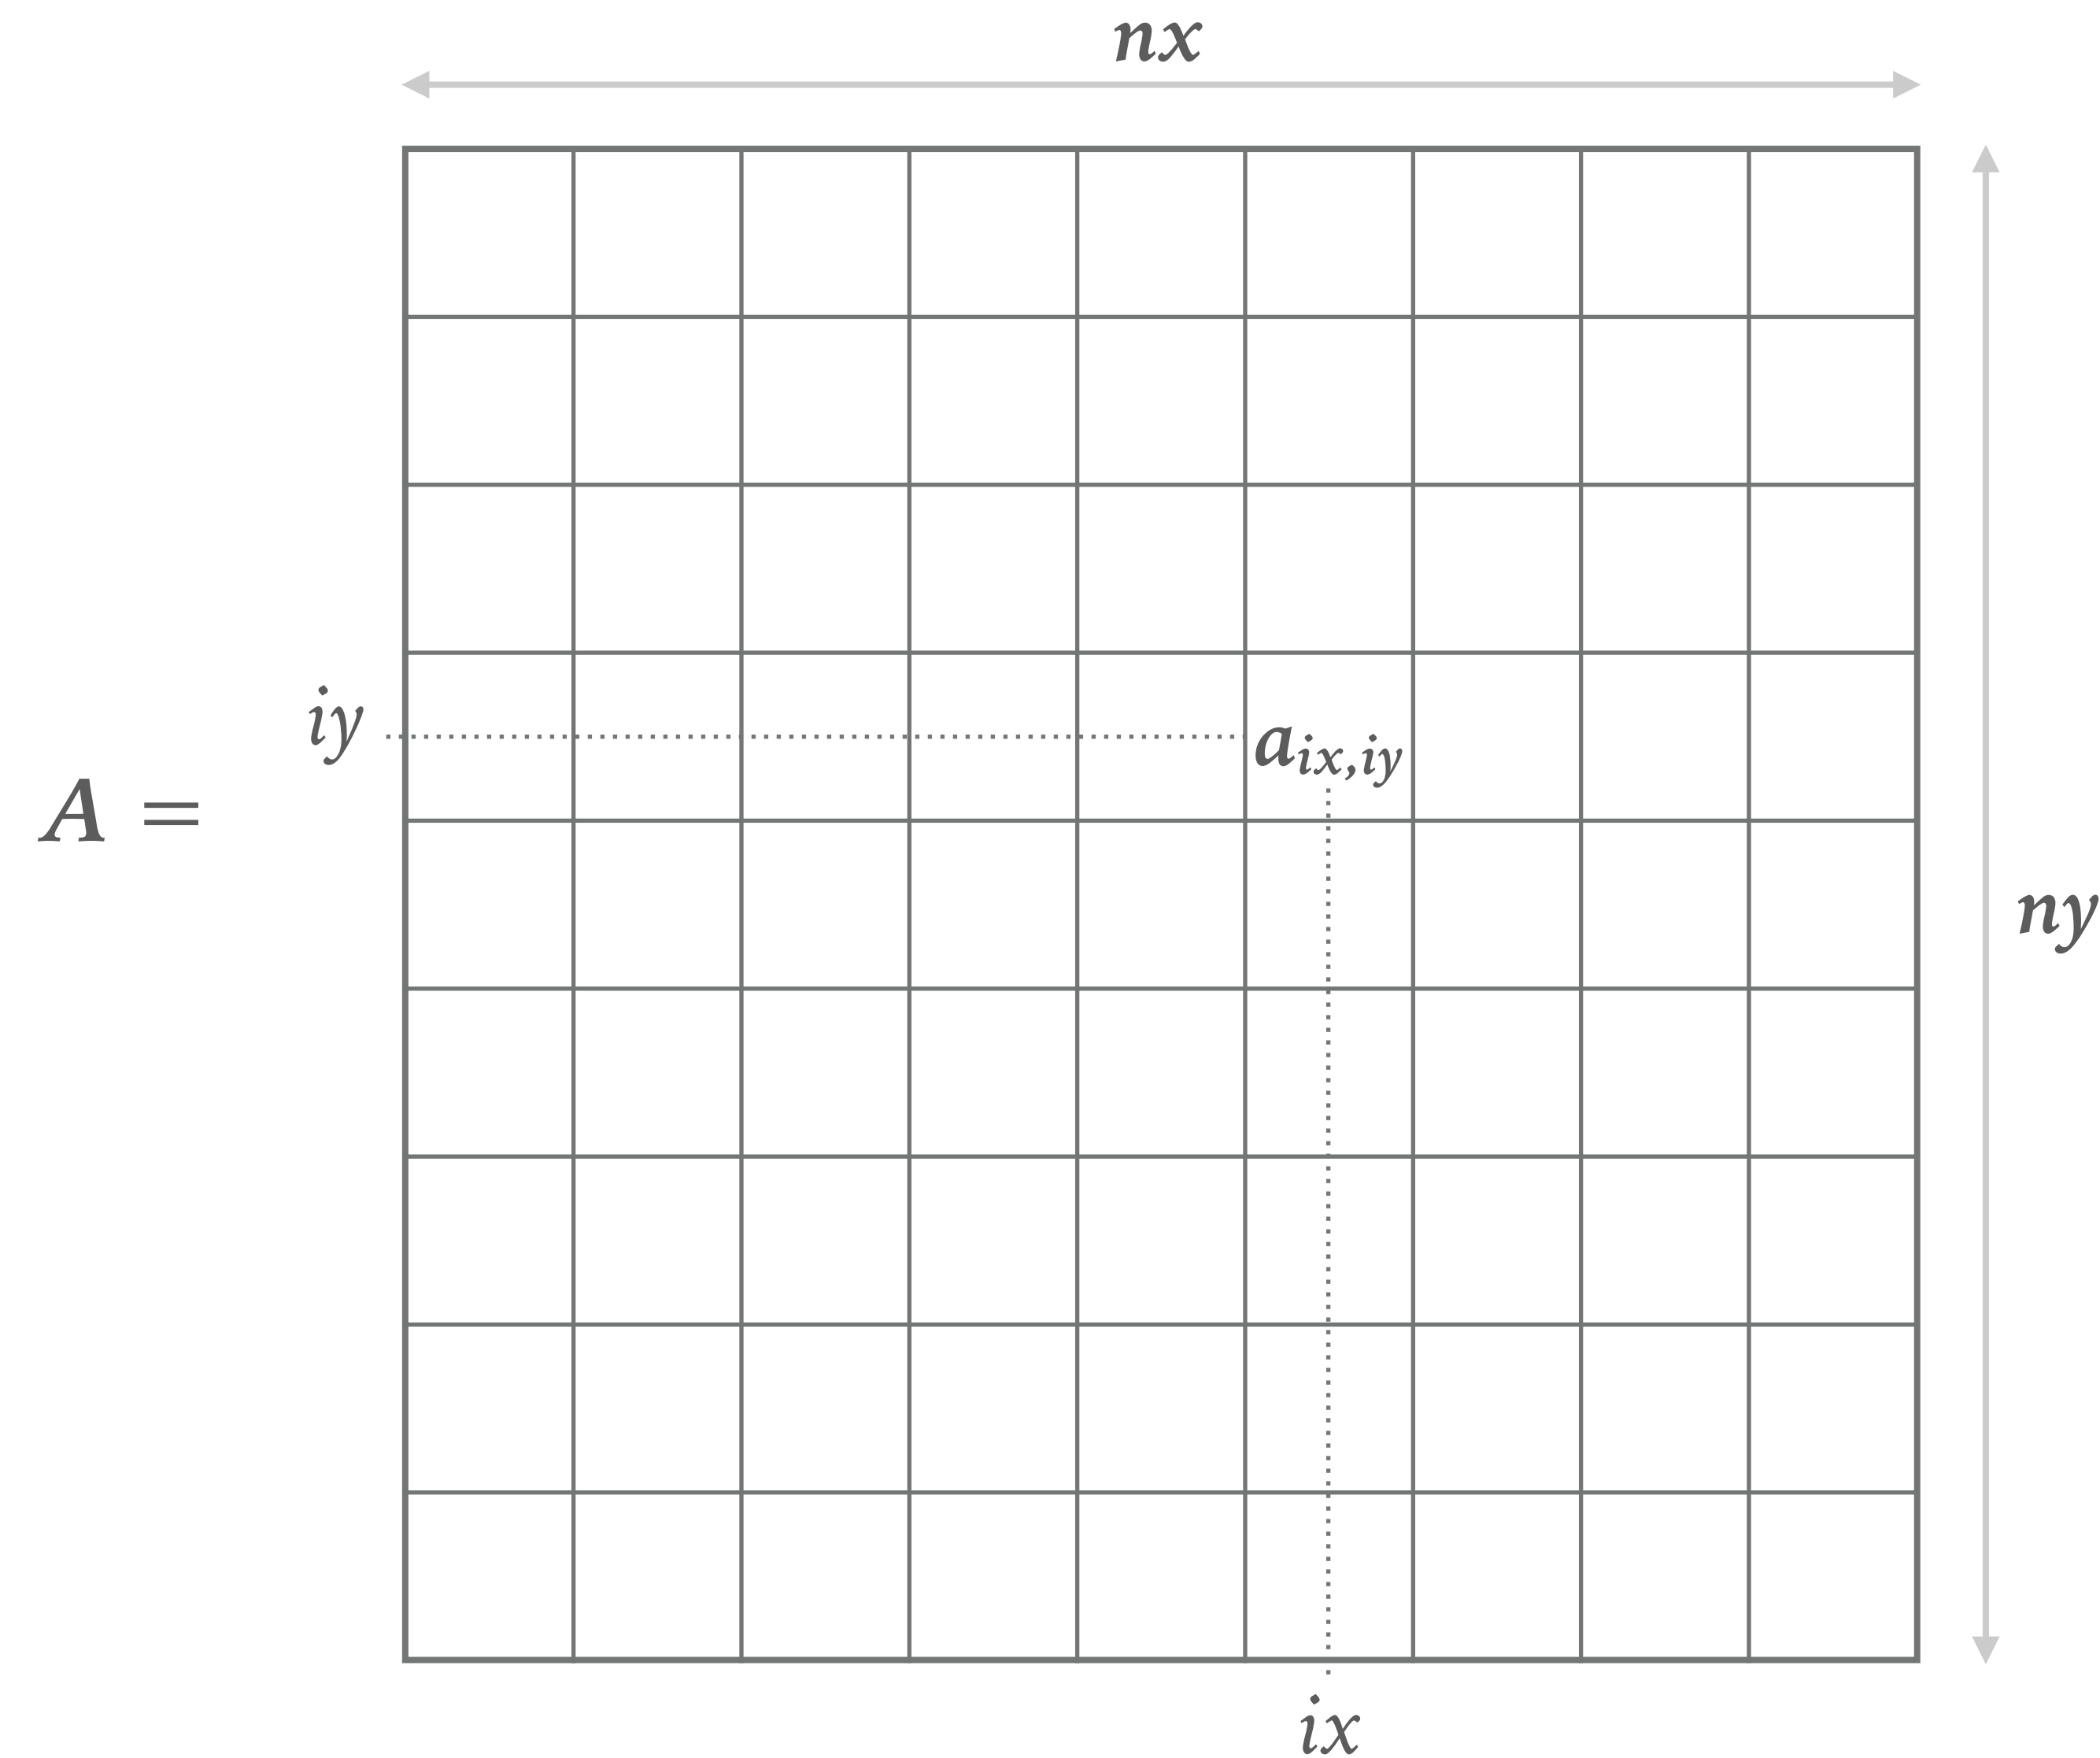

0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7	0	1	2	3	4	5	6	7
---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---	---

blockDim.x = nThreads = 8

gridDim.x = nBlocks = ?

gridDim.x = nBlocks = (nx + blockDim.x - 1) / blockDim.x
= (30 + 8 - 1) / 8
= 4

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

$$\text{idx} = \text{iy} * \text{nx} + \text{ix}$$

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

```
int idx = iy*nx + ix
```

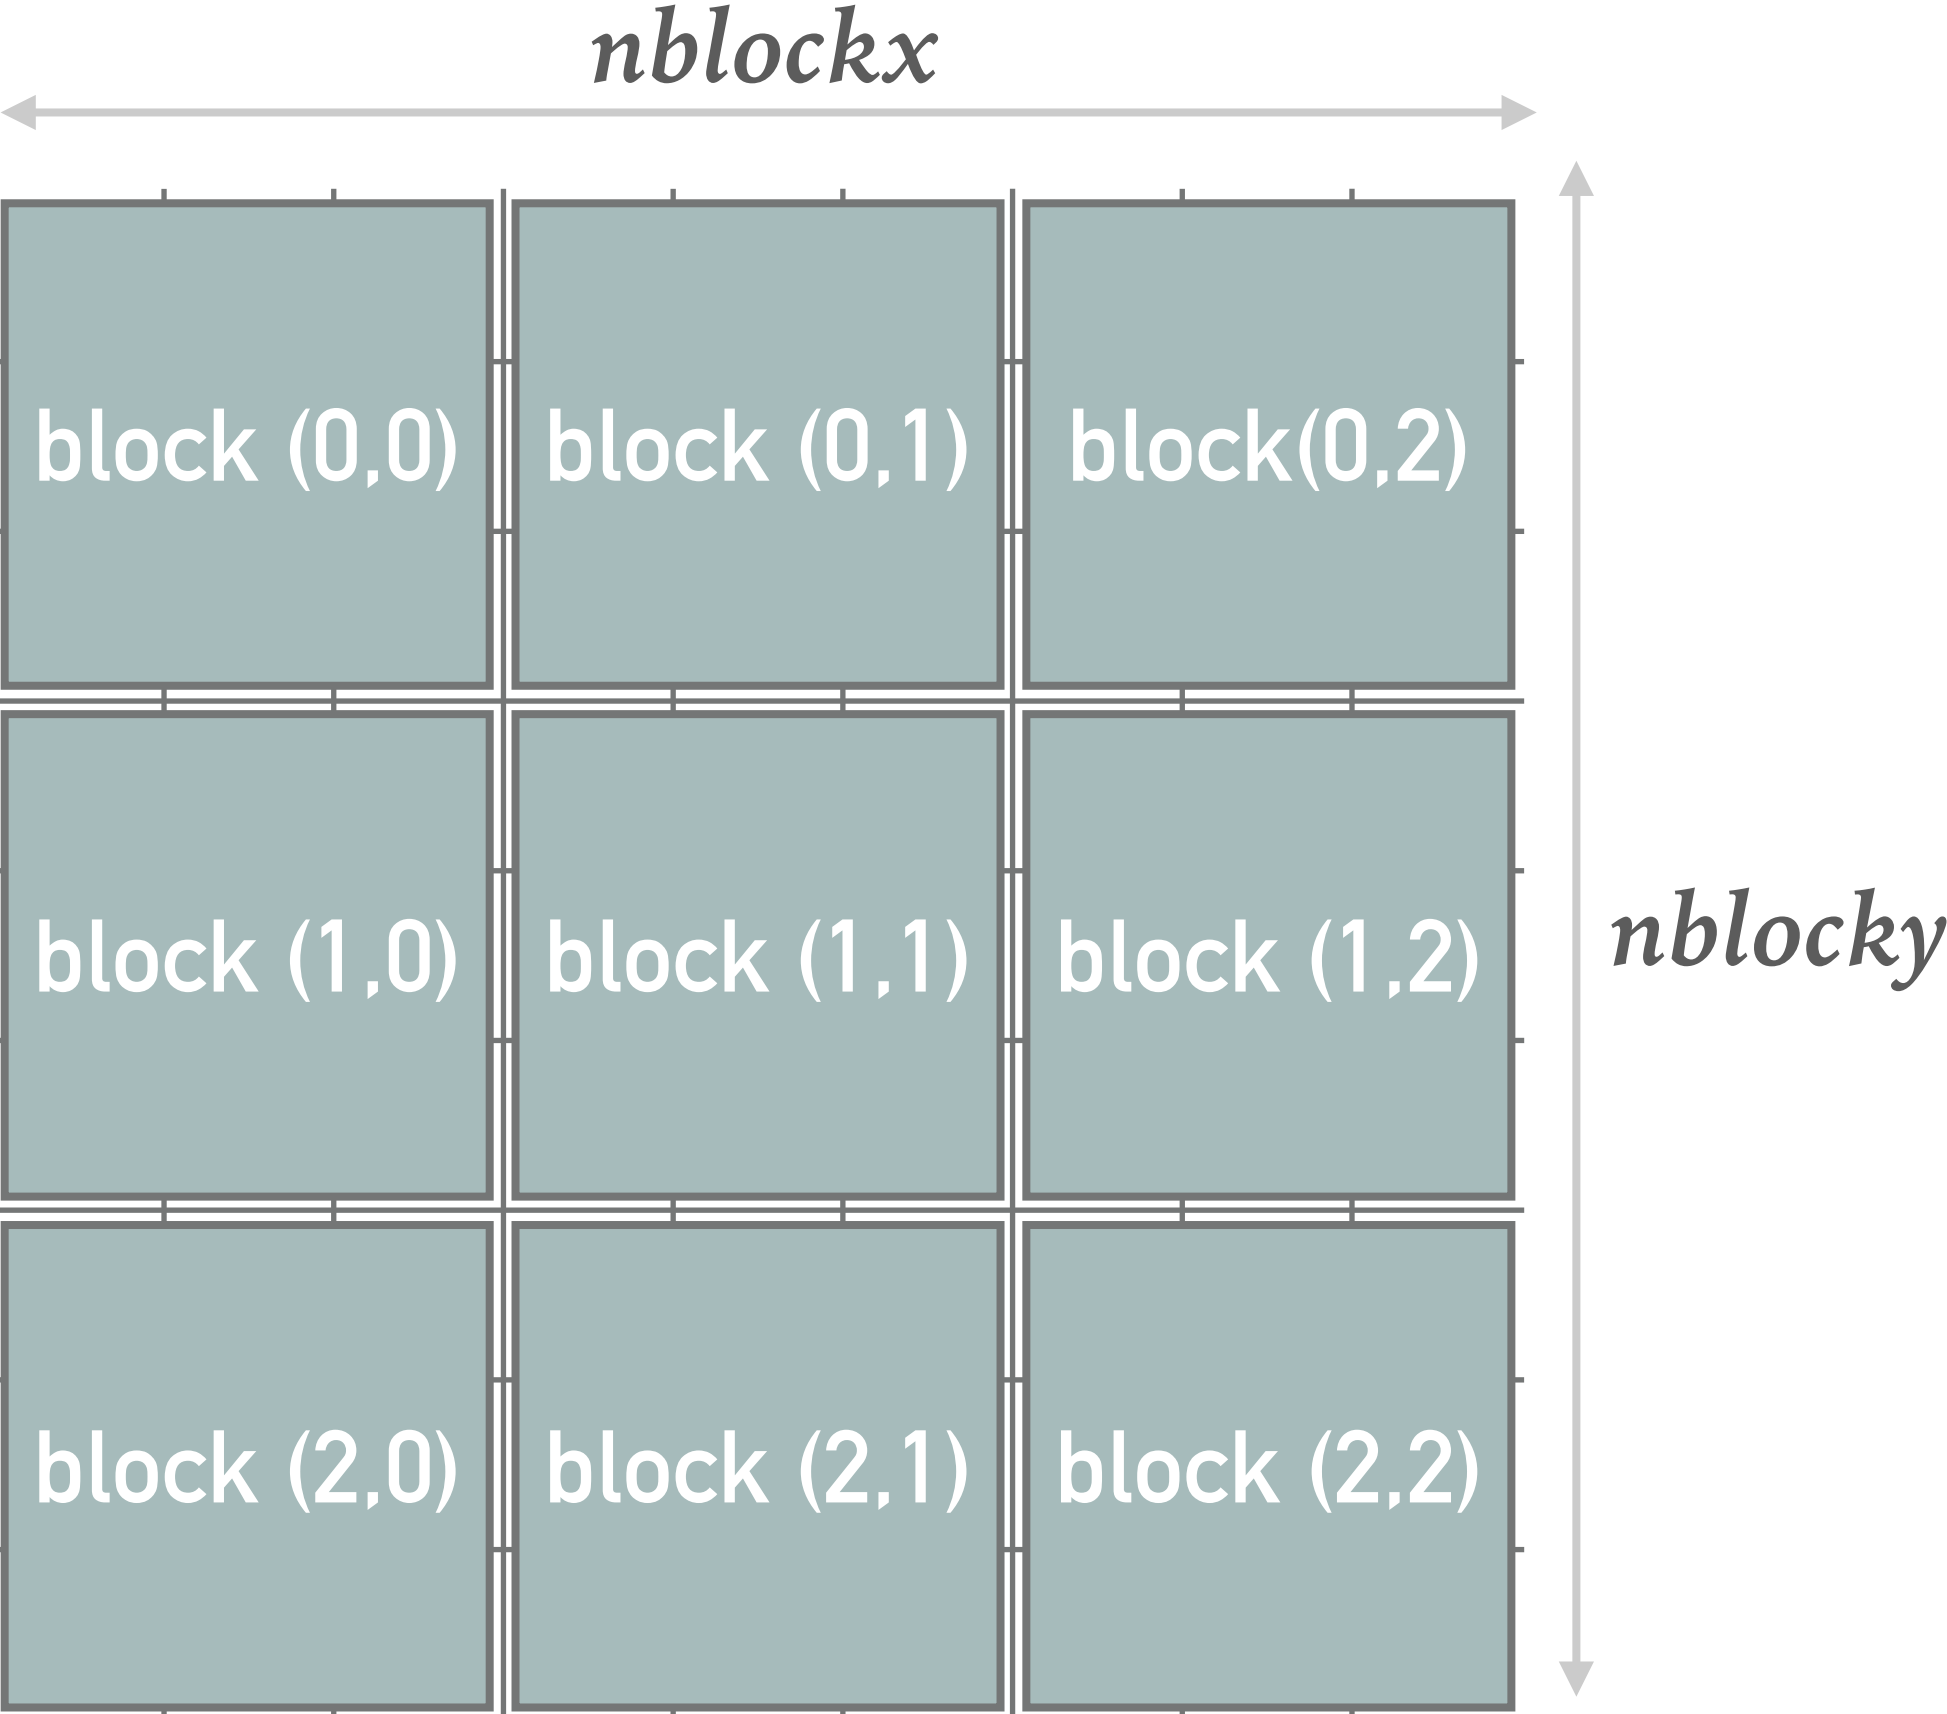

```
dim3 block(dimx, dimy, dimz);
```

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

$$idx = iy * nx + ix$$

```
dim3 grid(nblockx, nblocky, nblockz);
```

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

threadIdx.x (y,z)
- what is the thread index in a block in x,y,z directions

blockIdx.x (y,z)
- what is the block index in a grid in x,y,z directions

blockDim.x (y,z)
- how many threads in a block in x,y,z directions

gridDim.x (y,z)
- how many blocks in a grid in x,y,z directions

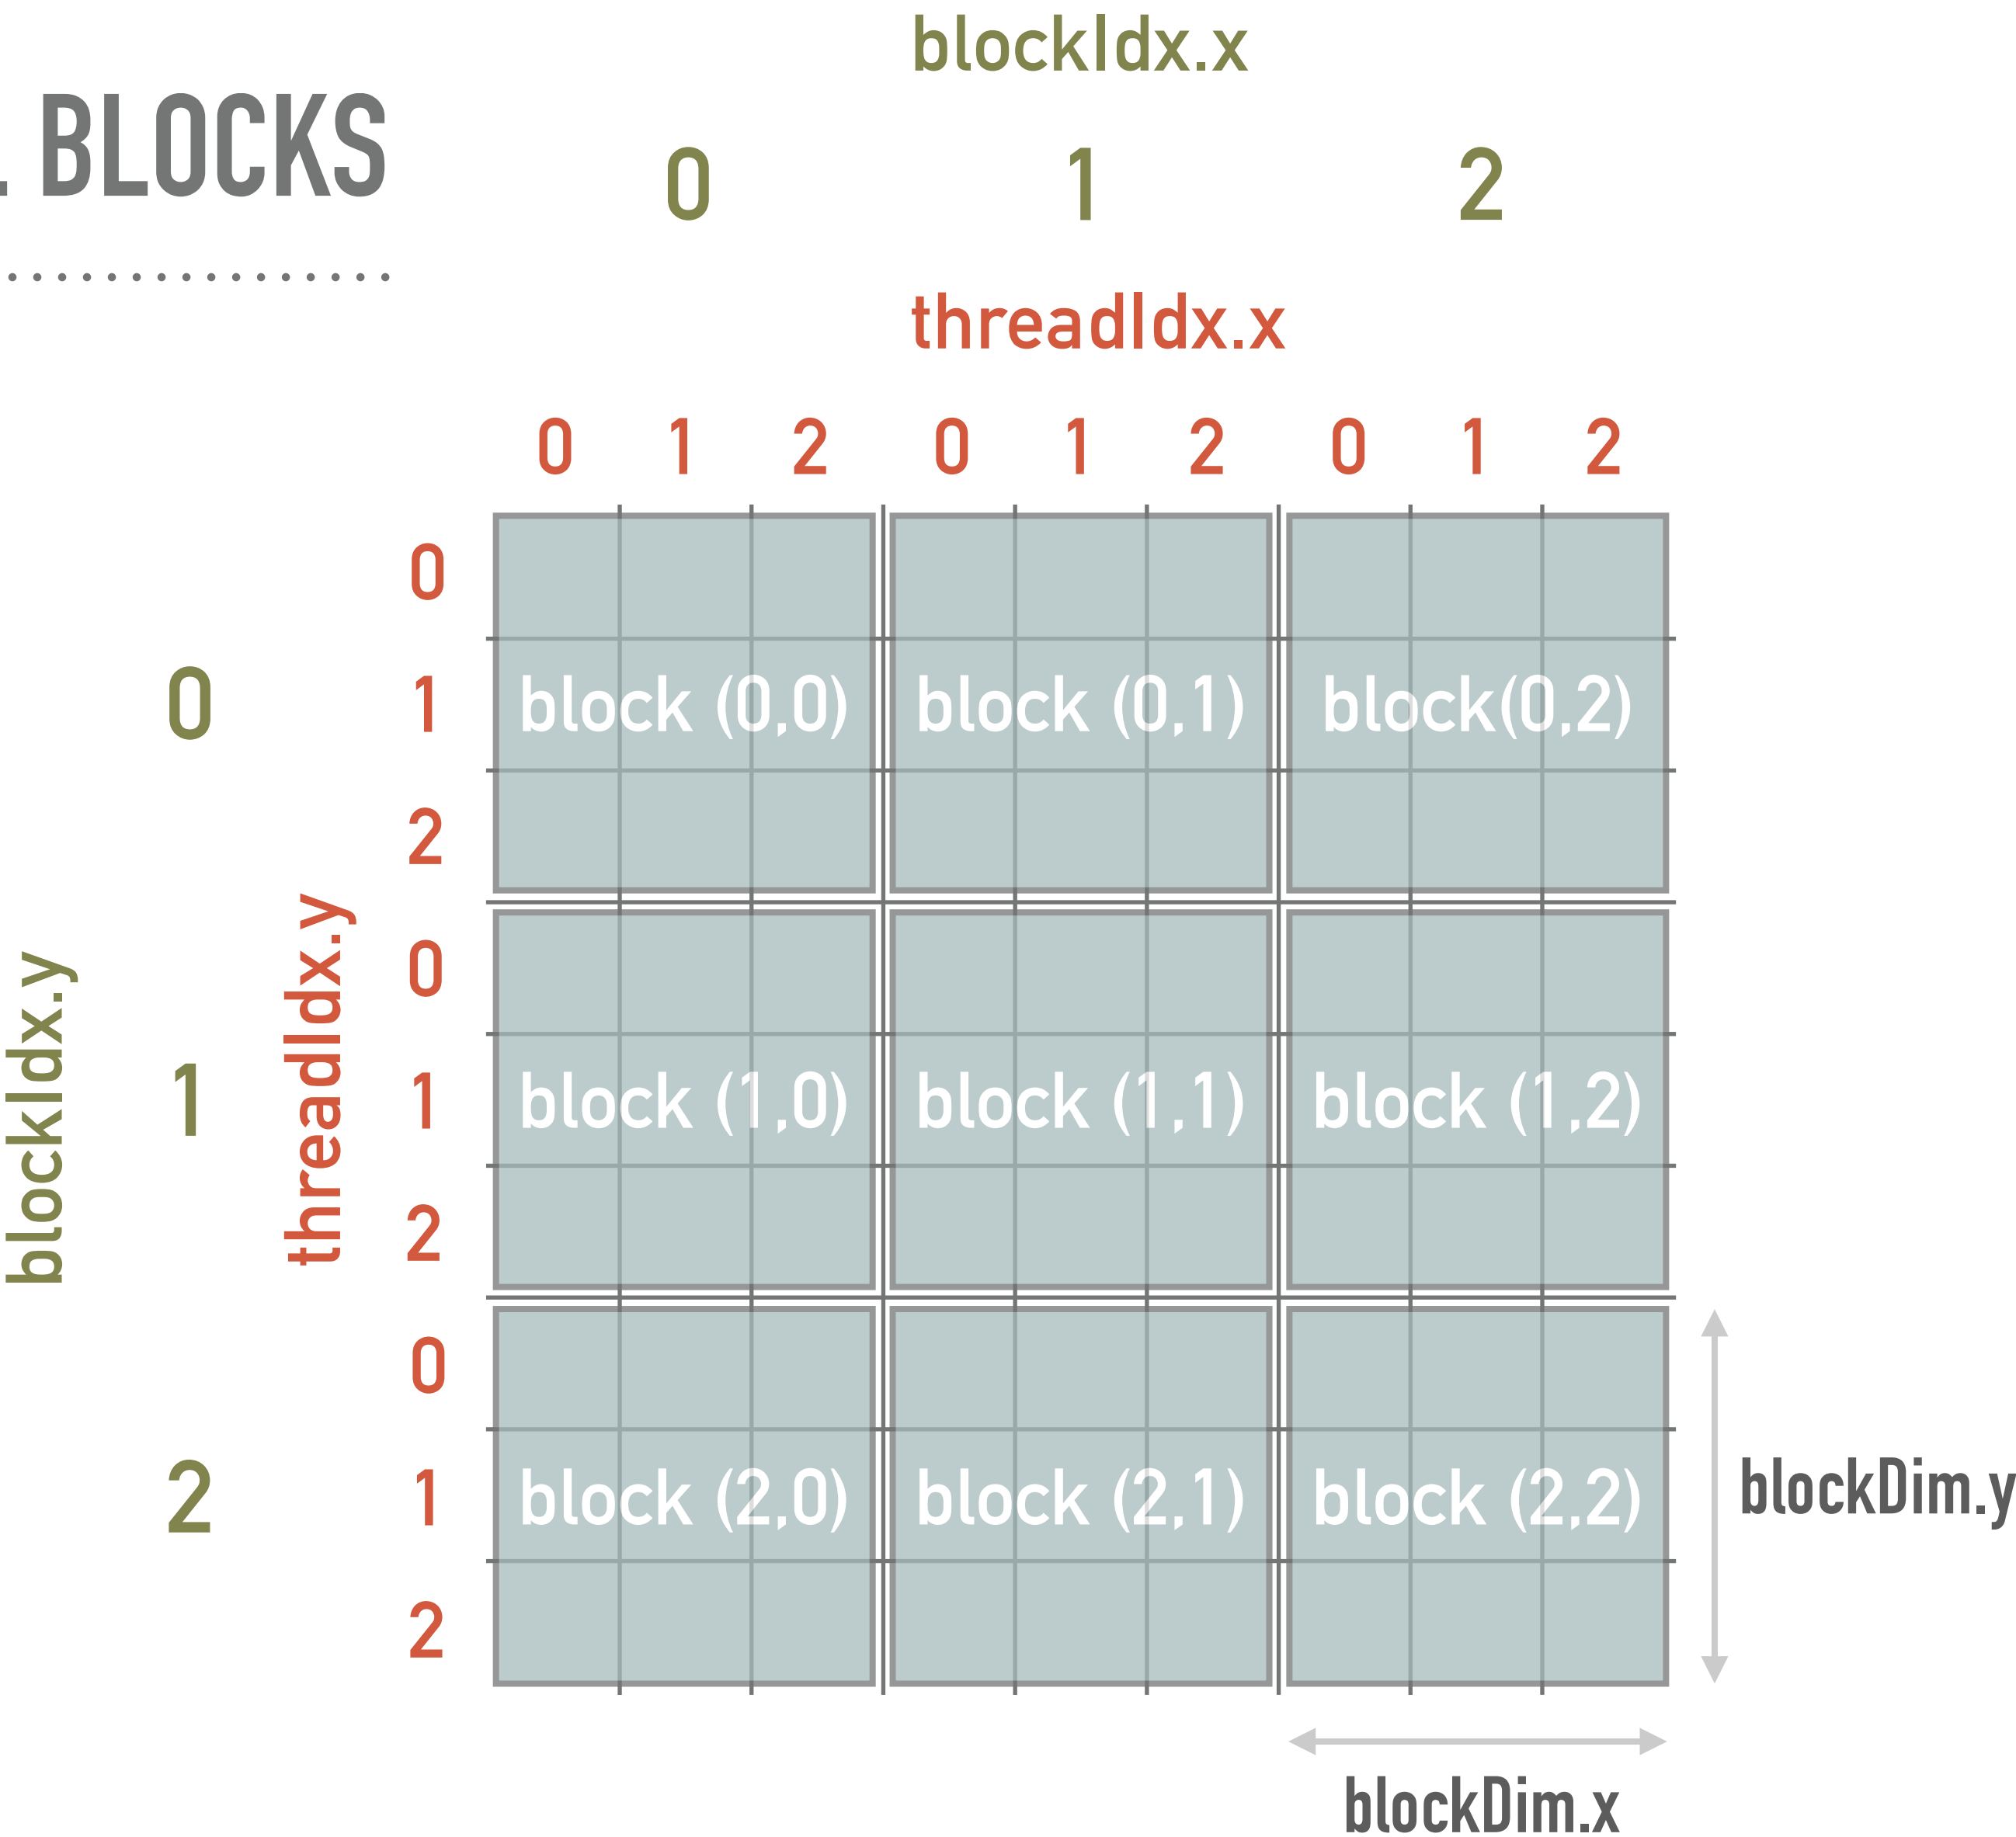

```
ix = blockIdx.x*blockDim.x + threadIdx.x
iy = blockIdx.y*blockDim.y + threadIdx.y
```

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

$$idx = iy * nx + ix$$

$$ix = blockIdx.x * blockDim.x + threadIdx.x$$

$$iy = blockIdx.y * blockDim.y + threadIdx.y$$

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

```
__global__ void sumMatrixOnHost(float *A, float *B, float *C,  
                                int nx, int ny);  
  
{  
    for (int iy = 0; iy<ny; iy++)  
        for(int ix = 0; ix<nx; ix++){  
            idx = iy*nx + ix;  
            C[idx] = A[idx] + B[idx];  
        }  
    }  
}
```

MATRIX ADDITION – MULTIDIMENSIONAL BLOCKS

```
__global__ void sumMatrixOnGPU2D(float *A, float *B, float *C,  
                                int nx, int ny);  
  
{  
  
    int ix = blockIdx.x*blockDim.x + threadIdx.x;  
    int iy = blockIdx.y*blockDim.y + threadIdx.y;  
    int idx = iy*nx+ix;  
  
    if(ix<nx && iy<ny)  
        C[idx] = A[idx] + B[idx];  
  
}
```
